### Notes

- <sup>1</sup> Assay highlights have been selected based on a combination of criteria, including observable mineralization and/or having a Metal Factor  $\geq 5 \text{ gm}^*\text{m}$  ( $\text{MF} = \text{Au g/t} * \text{Interval length}$ ).
- <sup>2</sup> Asterisk \* denotes visible gold (VG) observed in drill core.
- <sup>3</sup> Reported drill hole depths and interval lengths have been rounded to the nearest 0.1 metres. As a result, interval lengths may vary slightly from differences calculated directly from drill hole depths reported here.
- <sup>4</sup> True widths are estimated to be 60-90% of the reported core length intervals.
